Technical Game Developer & Creative Technologist

Versatile Technical Game Developer with 3 years of experience in Unity (Mobile, WebGL, VR) and C#. Expert in Object-Oriented Design and implementing complex systems for high-performance games. Proven track record of launching and publishing titles while managing third-party SDK integrations in collaborative environments. Skilled at leveraging CI/CD and Version Control workflows to bridge technical engineering with creative 3D art, delivering scalable and immersive production-ready experiences.

CORE COMPETENCIES & CERTIFICATIONS

Development Tools & SDKs: Third-Party SDK Integration (Ads, Analytics, IAP), Version Control (Git/CI/CD), Jira, API Management, C#, C++, Python, MySQL, object-oriented programming, data structures.

Graphics & XR: Shader Graph, PBR, Blender, Unity XR, AR Foundation, Oculus SDK, Mobile Optimization (Android, iOS, PC), rigging, animation, and asset pipeline optimization.

AI & Gameplay: Unity ML-Agents, FSM, Multiplayer Architecture (Photon/Mirror), Physics, Animation Systems, Performance Profiling, Memory Management, and decision trees.

Delivery & Execution: Agile Development, Agile teamwork, Technical Troubleshooting, testing, Performance Optimization, performance optimization, documentation, designing scalable architectures, project tracking with Jira, Design Patterns and CI/CD & Version Control Strategy.

Collaboration: Cross-functional Communication, Time management, Adaptability.

UI/UX & Design: User-centered design, interactive prototyping, UI frameworks (Unity UI/UIToolkit), graphic design, typography, and Adobe Creative Suite.

EDUCATION

2022-2026 Bachelor in Computer Games Development (BSCGD)

E-9 Air University, Islamabad

URDU Fluency in Urdu

ENGLISH Fluency in English

PROFESSIONAL EXPERIENCE

Jul-Nov 2025

Game Developer Intern, WRP, Islamabad

- Collaborated in a professional development team environment using Jira and Git to manage source code, adhering to CI/CD workflows and contributing to codebase health through rigorous peer code reviews.
- Built internal tools to optimize asset pipelines for complex systems, reducing import times by 20% and ensuring smooth performance across mobile and PC platforms.
- Integrated critical third-party SDKs and APIs to support live-game features, while actively resolving technical bottlenecks to maintain high-quality gameplay standards.

Selected Projects

2025-2026

CyberSafe - Narrative-Heavy 3D RPG, Unity 6, C#, Blender

- Accomplished complex branching story logic as measured by 5 distinct interactive scenarios by developing a custom narrative system and internal tools to manage conditional dialogue and state-driven player choices.
- Accomplished a streamlined Android pipeline as measured by optimized APK delivery by building internal build-automation scripts and implementing GPU instancing to maintain high-fidelity performance on mobile.

2025

AI & Branching Systems, Unity, C#, Python, Unity ML-Agents, ONNX

- Accomplished adaptive NPC behavior by architecting a Finite State Machine layered with decision trees, facilitating complex agent responses to player-driven world events and branching game states.

2024

Internal Graphics Engine & Tools, C++, OpenGL

- Accomplished high-performance graphics rendering as measured by stable frame rates by doing custom linear algebra implementations and Phong lighting models from scratch in C++.
- Accomplished engine modularity as measured by efficient asset handling by doing a full rendering loop and OBJ asset loader development without external math libraries.

2023-2024

Zombie Survivor - Branching Action-Survival, Unity, C#, Blender

- Accomplished a scalable gameplay pipeline by building modular internal tools for asset handling and an event-driven FSM that managed branching AI perception and combat transitions.

2024

SciFi WebGL Pipeline Project, UnityWebGL, C#, HTML5

- Accomplished high-responsiveness gameplay as measured by smooth input handling by doing physics-based shooting mechanics and raycast bullet systems.

2023

Astro Rush, Unity, C#

- Accomplished realistic vehicle physics as measured by intuitive driving mechanics by doing a custom Rigidbody-driven physics controller for planetary environments.

2022-2023

HyperCasual Game :Extinguisher, Unity, C#

- Accomplished mobile user engagement as measured by retention rates by doing one-touch control implementation and progressive difficulty balancing.
- Accomplished monetization effectiveness as measured by revenue tracking by doing third-party SDK integration for Ad monetization and in-app purchase systems.
