Technical Game Designer & Gameplay Programmer (Unreal Engine 5)

Versatile Unreal Engine Game Developer with 3 years of professional experience gameplay programming, performance optimization, and custom rendering pipelines. Strong proficiency in C++ and Blueprint visual scripting, with a proven ability to engineer scalable AI systems and interactive UIs. Expert in using Unreal Insights to profile and resolve CPU/GPU bottlenecks for cross-platform deployment on PC and console.

CORE COMPETENCIES & CERTIFICATIONS

Engine & Core Tools: Unreal Engine 4/5, C++, Blueprint Visual Scripting, Git, Jira, Visual Studio, CI/CD pipelines, OOP, Data Structures, and Memory Management.

Graphics & VFX: Niagara Visual Effects, Material Editor (HLSL), Lumen, Nanite, Blender, Ragdolls, PBR Workflows, Render Thread Optimization, and Asset Pipeline Automation.

AI & Gameplay: Enhanced Input System, Gameplay Ability System (GAS), Animation State Machines, Multiplayer Replication, and Multiplayer Replication Architecture.

Profiling & Execution: Unreal Insights, Stat Commands, GPU Profiling, Agile Development, Technical Troubleshooting, Performance Optimization, and Scalable Engine Architecture Design.

Collaboration: Cross-functional Communication, Time management, Adaptability.

UI/UX & Design: UMG, Interactive Prototyping, Adobe Creative Suite, and responsive UI framework development.

Certifications:

- Professional Certificate from Coursera: Epic Games Game Design
- Certificate of Packt: Unreal Engine Beginner and Intermediate Certificate

EDUCATION

2022-2026

[Bachelor in Computer Games Development \(BSCGD\)](#)
E-9 Air University, Islamabad

PROFESSIONAL EXPERIENCE

Jul-Nov 2025

Game Developer Intern, WRP, Islamabad

- Collaborated in a professional development environment using Jira and Perforce to manage C# and C++ source code, adhering to CI/CD workflows and contributing to project stability via rigorous peer code reviews.
- Built internal Editor Utility Blueprints to automate asset validation pipelines, reducing content import friction by 20% and ensuring engine-wide naming convention compliance.
- Integrated external REST APIs and JSON modules to support live-service features, utilizing Unreal Insights to identify and resolve CPU/GPU technical bottlenecks.

Selected Projects

2025-2026

CyberSafe - Narrative 3D RPG, Unity 6, Blender

- Successfully shipped to itch.io, demonstrating project delivery and production-ready build deployment.
- Accomplished complex branching story logic as measured by 5 distinct interactive scenarios by developing a custom Data Asset-driven narrative system to manage conditional dialogue and state-driven player choices.
- Accomplished a high-fidelity visual experience as measured by stable 60 FPS by implementing Nanite for geometry and Lumen for dynamic global illumination alongside custom C++ material functions.

2025

Neon Dash - High-Speed 3D Platformer (UE 5.7)

- Engineered an endless runner using hybrid C++/Blueprints for rapid, high-performance iteration. Implemented memory-optimized procedural track generation, C++ physics-based movement (wall-running, sliding), and stylized neon VFX with dynamic global illumination.
- Developed interactive HUDs and dynamic menu systems using UMG (Unreal Motion Graphics), handling event-driven user input for a seamless player experience.

2024-2025

Cyberborn - Open-World 3D Cyberpunk Survival (UE 5.7)

- Developed an open-world survival experience utilizing Nanite/Lumen for high-fidelity rendering. Implemented modular grid-based crafting, complex survival attributes (hunger/thirst/energy), and sophisticated AI using Behavior Trees/Blackboard for reactive rogue synthetic combat.
- Optimized performance for cross-platform deployment (PC/Console), utilizing platform-specific configuration settings to ensure consistent frame rates.
- Implemented character physics and ragdoll simulations for AI combat to enhance responsiveness and realism.

2024

Internal Graphics Engine & Tools, C++, OpenGL

- Accomplished high-performance graphics rendering as measured by stable frame rates by doing custom linear algebra implementations and Phong lighting models from scratch in C++.
- Accomplished engine modularity as measured by efficient asset handling by doing a full rendering loop and OBJ asset loader development without external math libraries.
