Unity Developer (Mobile & WebGL)

Aspiring Unity Developer with 3 years of intensive project-based experience in mobile and WebGL development. Proven capability in shipping functional games, optimizing for performance, and integrating third-party monetization SDKs.

Seeking to leverage a strong foundation in C#, clean code architecture, and cross-functional team experience to contribute to high-performance game projects .

CORE COMPETENCIES & CERTIFICATIONS

Programming: C#, C++,HTML,HTML5,CSS, Python, object-oriented programming, data structures, algorithm design.

Tools and Platforms: Unity, Unreal Engine,UnityWebGL, OpenGL, Adobe Photoshop, Visual Studio, Git, GitHub, Blender, Asset Pipeline Optimization.

AI and automation: Unity ML-Agents, finite state machines, decision trees, ONNX integration, Performance Profiling, Memory Management, and third-party SDK integration (Ads, In-App Purchases, Multiplayer/Database).

Delivery & Execution: Agile teamwork, Technical Troubleshooting, testing, performance optimization, documentation, designing scalable architectures, project tracking with Jira, Design Patterns (Singleton, MVC, Observer), and CI/CD & Version Control Strategy.

Collaboration: Cross-functional Communication, Time management, Adaptability.

PROFESSIONAL EXPERIENCE

Jul-Sept 2025

Game Developer Intern, WRP, Islamabad

- Accomplished seamless production alignment as measured by consistent sprint velocity by doing daily cross-functional collaboration with designers, artists, and QA engineers within an Agile development workflow.
- Accomplished 100% on-time feature delivery as measured by completing 5+ successful sprint cycles by doing sprint planning, stand-ups, and proactive task management in Jira.
- Accomplished high system modularity as measured by a 20% increase in script reusability by doing high-level game architecture design using Unity's component-based patterns.
- Accomplished stable and maintainable codebases as measured by a 15% reduction in production bugs by doing active peer code reviews and implementing rigorous version control best practices in Git.

Selected Projects

2025-2026

CyberSafe - 3D Mobile RPG, Unity 6, C#, Blender

- Accomplished robust monetization and engagement as measured by successful third-party data tracking by doing advanced API integration for Ads, Analytics, and In-App Purchase (IAP) SDKs.
- Accomplished high-fidelity mobile performance as measured by optimal loading times by doing rigorous performance profiling, GPU instancing, and mesh compression techniques.

2025

AI-Driven Football Game, Unity, C#, Python, Unity ML-Agents, ONNX, YAML

- Accomplished intelligent NPC behavior as measured by enhanced AI adaptability by doing game architecture design using Finite State Machines and decision trees, exported via ONNX.

2024

Custom 3D Rendering Engine, C++, OpenGL

- Accomplished high-performance graphics rendering as measured by stable frame rates by doing custom linear algebra implementations and Phong lighting models from scratch in C++.
- Accomplished engine modularity as measured by efficient asset handling by doing a full rendering loop and OBJ asset loader development without external math libraries.

2023-2024

Zombie Survivor - 3D Action-Survival Game, Unity, C#, Blender

- Accomplished scalable gameplay systems as measured by modular script reusability by doing component-based game architecture design and pathfinding optimization.

2024

SciFi FPS Game, UnityWebGL, C#, HTML5

- Accomplished high-responsiveness gameplay as measured by smooth input handling by doing physics-based shooting mechanics and raycast bullet systems.

2023

Astro Rush, Unity, C#

- Accomplished realistic vehicle physics as measured by intuitive driving mechanics by doing a custom Rigidbody-driven physics controller for planetary environments.

2022-2023

Extinguisher, Unity, C#

- Accomplished mobile user engagement as measured by retention rates by doing one-touch control implementation and progressive difficulty balancing.
- Accomplished monetization effectiveness as measured by revenue tracking by doing third-party SDK integration for Ad monetization and in-app purchase systems.

2022

Archery Game, C++, Graphics.h

- Accomplished realistic ballistics as measured by hit accuracy by doing custom projectile trajectory calculations and trigonometry-based hit detection.
- Accomplished robust game loop stability as measured by consistent user experience by doing comprehensive state management for rendering, input handling, and scoring.

EDUCATION

2022-2026

Bachelor in Computer Games Development (BSCGD) | E-9 Air University, Islamabad
